1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translations to those Offices.
4. **REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices)(Article 39(1))(see also the reminder sent by the International Bureau with Form PCT/TB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide

**V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. Statement**

Novelty (N)	Claims 1-14	YES
	Claims NONE	NO
Inventive step (IS)	Claims 1-14	YES
	Claims NONE	NO
Industrial applicability (IA)	Claims 1-14	YES
	Claims NONE	NO

**2. Citations and explanations (Rule 70.7)**

None of the citations, when taken either singly or in any combination, either explicitly discloses or obviously suggests the invention as claimed.

DE 3716750, which is considered to be the closest prior art, discloses a foundation structure installation method in which walls are continuously erected from the bottom upwards near the surface and lowered continuously or in stages into trenches filled with a supporting liquid (water). As lowering takes place, the ground is simultaneously removed from beneath the foundation. This method is thus at variance from that defined in claim 1, which requires a support member to be positioned prior to forming a foundation adjacent to it, and then excavating the ground beneath the foundation to a prescribed depth and dropping the formed foundation to the prescribed depth. This variation is considered to be non-obvious to a person of ordinary skill in the art in the light of the disclosures of the citations, and hence the claimed invention possesses both novelty and an inventive step.
